

Motive motors from type 160 to type 355 are built in cast iron and have all the characteristics of the Delphi line, among which we remind:

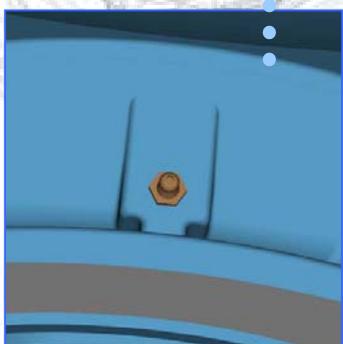

- tropicalized and reinforced winding
- pull-resistant cable stoppers
- dynamically balanced rotor
- multitension 400/690V 50Hz + 440/760 60Hz
- service S1, IP55, Class F
- Eff. 2 o 1

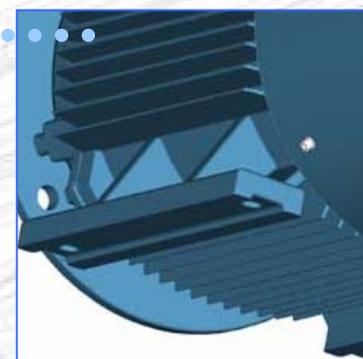

Maintaining the same sealing system of the whole delphi line, the connection box guarantees an IP56 degree, without running the common risks of a protection affected by bad mating iron surfaces

3 PTC thermistors protect the motor and the plant by eventual abnormal work

From size 180 and up all motors are equipped with a greaser

Due to the high torque, the motor is secured by feet die-casted with the frame
